

CLAIMS:

5 What is claimed is:

1. A connector comprising:

an electrically conductive member having a longitudinal section at least a portion of which provides a cylindrical hollow end;

10 an electrically conductive pin positioned with respect to said electrically conductive member, a first part of said electrically conductive pin being substantially centrally located within said hollow end: and

a single-piece electrically insulating body surrounding said electrically conductive member and said electrically conductive pin.

15

2. The connector of Claim 1 wherein said connector is a right-angle connector.

3. The connector of Claim 1 wherein said electrically insulating body is provided with at least two spacing feet and at least one compressible leg.

20

4. The connector of Claim 1 wherein said electrically conductive pin has a second part projecting in a direction transverse to said first part.

5. The connector of Claim 4 wherein said second part of said conductive pin extends
25 beyond a surface of said electrically insulating body.

6. The connector of Claim 5 wherein said electrically insulating member has a longitudinal axis and has at least one leg extending in a direction transverse to said longitudinal axis and having a length sufficient to extend beyond a surface of said electrically
30 insulating body.
